

CYFUTURE PTY LTD - Fully Functioning Website

Scenario Question

Background:

CYFUTURE PTY LTD (Lesotho) partners with local and international institutions to place undergraduate, graduate, and postgraduate students into virtual internships hosted by international companies.

IMPORTANT: The system must calculate and manage fees internally but must NOT include any public pricing or fees pages.

Scenario Question:

You are hired to develop a fully functioning CYFUTURE web platform using HTML, CSS, JavaScript, PHP, and MySQL, designed to be easily hosted on cPanel.

The system must enable:

- Local institutions to partner with CYFUTURE
- International institutions to partner
- International companies to partner
- Students (undergraduate, graduate, postgraduate) to register and be placed
- Admin to manage approvals, placements, and reporting

User Roles:

1. Student
2. Institution Partner
3. Company Partner
4. CYFUTURE Admin
5. Public Visitor

Public Website Pages (No Fees Page):

- Home
- About
- Partner With Us
- Student Registration Entry
- Login
- Contact (stored in database)
- FAQ

Core Functional Requirements:

Authentication:

- Secure registration/login/logout
- Password hashing
- Role-based access control
- Email verification OR Admin approval

Institution Module:

- Register as local/international
- Upload partnership document
- Track approval status
- Confirm student affiliation

Company Module:

- Register company
- Submit internship requests (role, interns needed, skills, start date, 3-month duration)
- View shortlisted candidates
- Evaluate interns

Student Module:

- Register by category
- Upload documents (CV, ID, proof)
- Apply for opportunities
- Track status (Submitted → Verified → Shortlisted → Placed → Completed)
- Accept/decline placement

Internal Billing (No Public Fees Page):

- Company: \$100 per month per intern × 3 months
- Postgraduate: R600 once-off
- Undergraduate/Graduate: R300 once-off
- Store invoices, payments, and status in database

Admin Responsibilities:

- Approve partners
- Verify documents
- Match students to opportunities
- Track 3-month internship progress
- Generate reports

Database Tables (Minimum):

users, students, institutions, companies, internship_requests, opportunities, applications, placements, invoices, payments, checkins, evaluations, contact_messages

Technical Requirements:

- PHP + MySQL (cPanel compatible)
- PDO/MySQLi prepared statements
- Server-side + client-side validation
- Separate dashboards per role
- Secure file uploads

Deliverables:

1. Full source code
2. SQL database file
3. cPanel installation guide
4. Test accounts
5. Screenshots/demo proof
